Glioblastoma is one of the most complex, deadly and treatment resistant cancers, according to the National Brain Tumor Society. More than 14,490 Americans are expected to receive a GBM diagnosis in 2023. GBM accounts for 50.1% of all primary brain tumors. It is estimated that more than 10,000 individuals will succumb to glioblastoma every year. The five-year survival rate for glioblastoma is only 6.9% and the average length of survival for glioblastoma patients is estimated to be only 8 months.

EBCI staff interview patients to pre-qualify them for the latest clinical trials and studies offering the best chances to fight brain cancer.
