

# PERSONALIZING CANCER TREATMENT WITH 3D PREDICT™

At Kiyatec we know that every **body** is different, and we believe that your treatment should be specific to you. We are here to help you and your care team find the chemotherapies that are most effective in treating your cancer.

Our **3D Predict** test uses cells taken from your own tumor, collected as part of a standard of care biopsy surgery or resection. We grow these cells in a special environment that mimics what's happening with your tumor and immune system.

This helps us test how different cancer treatments work on your specific cancer. With **3D Predict**, doctors can see how the drugs interact with your tumor cells before giving you the treatment.

---

Along with other tests, such as genetic testing, 3D Predict can help you and your doctor plan the best treatment strategy for **you**.

---

## What to expect

### ORDER

Your physician will order 3D Predict testing to create a more personalized treatment plan for you.

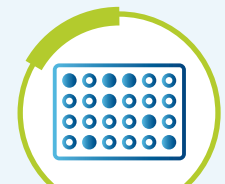

### COLLECT

During a standard of care biopsy or surgery, your doctor will collect a tissue sample from your tumor and send it to Kiyatec.

### TEST

Once we receive your tissue sample, we do all the work to begin all the testing on your tumor.

### TREAT

After receiving the results in 7 to 10 days, your doctor will get in touch to discuss next steps in your treatment process.

**No extra procedures. Just answers.**

If you have any additional questions, please call us at **1-864-293-7097**.
